DETAILED ACTION

1. This action is responsive to the application filed on December 27, 2001. Claims 1-2 are pending. Claims 1-2 represent a method and apparatus for generating linking means and updating text files on a wide area network.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-2 are rejected under 35 U.S.C. 102(e) as being anticipated by Tribbeck US 20020059333 A1.

As per claim 1, Tribbeck teaches a method for generating a link means in a file and updating text in the file on a computer network, wherein a provider computer and a user computer are in communication via the computer network, and wherein the user computer is capable of accessing the file, comprising:

selecting key words and placing each key word a key word list (para. 0053 and Fig. 2);

creating an association between each key word and predefined data (para. 0053-0054 and Fig. 5);

creating a linking means between the key word and the predefined data, wherein the user can access the predefined data via the linking means (para. 0054, 0083, Figs. 11, 14, and 15).

As per claim 2, Tribbeck teaches a system for generating a link means in a file and updating text in that file on a computer network, wherein a provider computer and a user computer are in communication via the computer network, and wherein the user computer is capable of accessing the file, comprising:

a database for storing selected key words (para. 0053 and Fig. 2);

a means for creating an association between each key word and predefined data (para. 0053- 0054 and Fig. 5);

a means for creating a linking means between the key word and the predefined data, wherein the user can access the predefined data via the linking means (para. 0054, 0083, Figs. 11, 14, and 15).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ciara Martin whose telephone number is 571-272-7507. The examiner can normally be reached on M-F 6:30- 4:00 with second Fridays off.
